

Who are we ?

Founded in **1999**, ONSE7 is an innovation and renovation company that works in construction with the aim of **saving** time and space, effort and cost, while having a concern for the protection of **health**. and the **environment** as well as an aesthetic vision.

Our mission is to design inventions / innovations to contribute to a **greener world**.

All products presented by ONSE 7 are protected by national and international patents (5 products)

Our products have received 14 distinctions including the prestigious medal from the Paris Chamber of Commerce and Industry.

Our products have been presented to the world through numerous articles in specialized and general public magazines.

Invention could slash energy consumption

The innovation, which was tested to light a four-storey building, successfully converted voltage from 220V to 14V, thus, reducing energy consumption by 85 per cent.

Context

Several studies have shown the benefits of cleaning the private parts with water after a bowel movement or after urination. These studies have shown that this greatly reduces the risk of contamination from urogenital infections.

Our product

The 2-in-1 toilet-bidet will allow you to maintain personal hygiene in simple and effective ways. Our system is made up of a bidet integrated into the toilet and a mechanical thermostat to adjust the water temperature and ensure optimal comfort.

Product benefits

Hygiene

Personal hygiene is requested by caregivers to reduce the risk of infection..

Economy

A mechanical thermostat for an inexpensive hot water source

Ecology

10 million trees are felled each year to satisfy global toilet paper consumption

Ease of use

A product that adapts to everyone's use: Children, the elderly, disabled patients...

An expending market

During Second Quarter 2020, demand for bidets increased by 191%.

BIDET TOILET 2 IN 1

Product function

These toilets are fitted with an integrated bidet, making it easier to wash the private parts.

2

On one side, there is a faucet allowing the pressure of the water jet to be regulated at the convenience of the user.

On the other side, a mechanical thermostat is used to adjust the temperature of the water delivered by the jet.

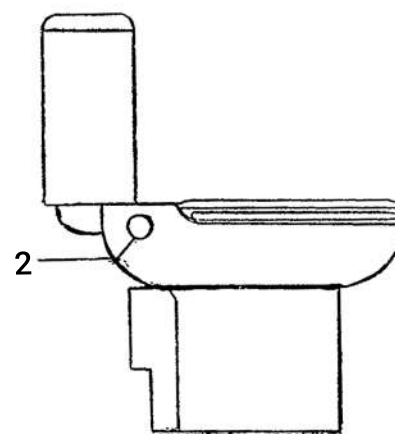

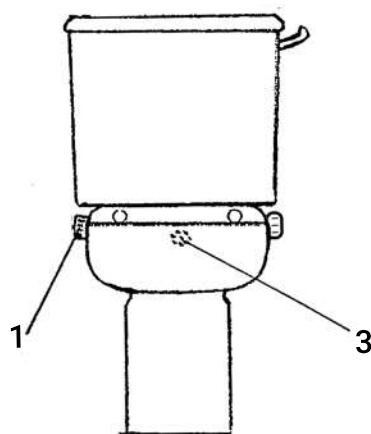

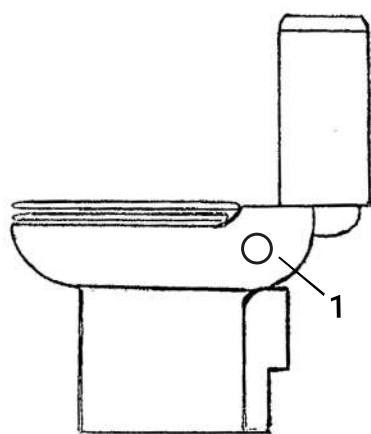

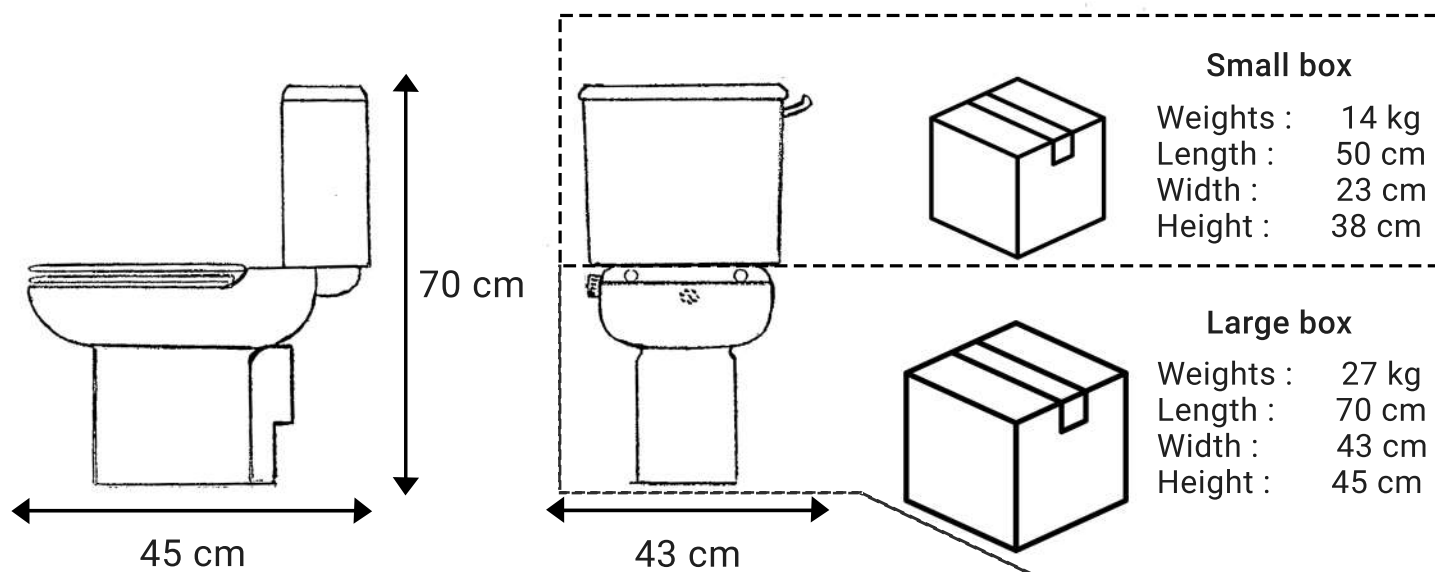

3

The thermostat is directly connected to the hot water supply, allowing continuous hot water to be supplied.

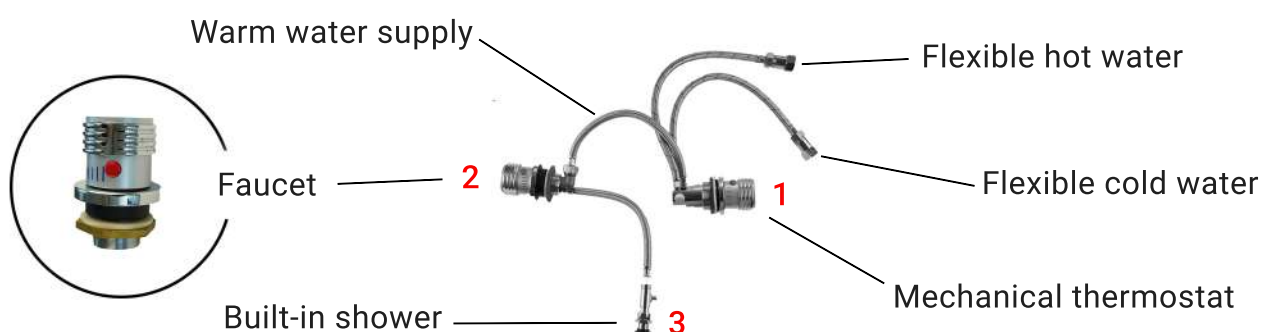

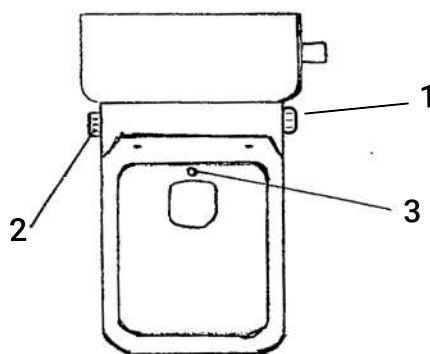

Product information

Caption

- 1 : Mechanical thermostat
- 2 : Faucet
- 3 : Integrated shower

Production capacity

All necessary procedures have been developed with full-scale production in mind,

the toilets are produced in a factory located in Egypt but will soon be produced in Europe

The products are stored in Villeneuve L'Archevêque (1h30 from Paris) on a surface of more than 1000m², with a view to distribution throughout the national territory.
